
Online Examination Report

Date:	21.07.2014
Attempts:	1
Examinee:	Anoku, Martin
Date of birth:	8/28/1984
Subject:	040-Human Performance
Result:	60 %
Time used:	00:00:13 (HH:MM:SS)

Attachments

1. List of result by question
2. List of result by topic
3. Detailed question result report

Attachment 1: List of result by question

CQB Number	Internal Number	Syllabus reference	Chapter	Points	Max. Points
1	208	40.	HUMAN PERFORMANCE	1,00	1,00
2	194	40.	HUMAN PERFORMANCE	1,00	1,00
3	165	40.	HUMAN PERFORMANCE	1,00	1,00
4	193	40.	HUMAN PERFORMANCE	1,00	1,00
5	164	40.	HUMAN PERFORMANCE	1,00	1,00
6	169	40.	HUMAN PERFORMANCE	1,00	1,00
7	186	40.	HUMAN PERFORMANCE	1,00	1,00
8	206	40.	HUMAN PERFORMANCE	0,00	1,00
9	205	40.	HUMAN PERFORMANCE	1,00	1,00
10	68	40.2.1.1	The atmosphere	1,00	1,00
11	18	40.2.1.2	Respiratory and circulatory systems	1,00	1,00
12	24	40.2.1.2	Respiratory and circulatory systems	0,00	1,00
13	88	40.2.1.2	Respiratory and circulatory systems	0,00	1,00
14	34	40.2.1.2	Respiratory and circulatory systems	0,00	1,00
15	61	40.2.1.2	Respiratory and circulatory systems	1,00	1,00
16	71	40.2.1.2	Respiratory and circulatory systems	1,00	1,00
17	33	40.2.1.2	Respiratory and circulatory systems	0,00	1,00
18	27	40.2.2.2	Vision	0,00	1,00
19	13	40.2.2.2	Vision	0,00	1,00
20	50	40.2.2.2	Vision	1,00	1,00
21	79	40.2.2.5	Integration of sensory inputs	0,00	1,00
22	23	40.2.2.5	Integration of sensory inputs	0,00	1,00
23	28	40.2.3.3	Problem areas for pilots	0,00	1,00
24	4	40.2.3.3	Problem areas for pilots	1,00	1,00
25	31	40.2.3.4	Intoxication	1,00	1,00
26	14	40.3	BASIC AVIATION PSYCHOLOGY	0,00	1,00
27	101	40.3	BASIC AVIATION PSYCHOLOGY	1,00	1,00
28	9	40.3.1.3	Memory	1,00	1,00

CQB Number	Internal Number	Syllabus reference	Chapter	Points	Max. Points
29	75	40.3.1.4	Response selection	1,00	1,00
30	29	40.3.2.3	Theory and model of human error	1,00	1,00
31	5	40.3.4.3	Co-operation	1,00	1,00
32	59	40.3.4.4	Communication	0,00	1,00
33	119	40.3.5	Human behaviour	0,00	1,00
34	112	40.3.5	Human behaviour	1,00	1,00
35	114	40.3.5	Human behaviour	0,00	1,00
36	113	40.3.5	Human behaviour	0,00	1,00
37	25	40.3.5.1	Personality, attitude and behaviour	0,00	1,00
38	11	40.3.5.1	Personality, attitude and behaviour	1,00	1,00
39	48	40.3.6.2	Stress	1,00	1,00
40	37	40.3.6.2	Stress	1,00	1,00
Total:60%				24,00	40,00

Attachment 2: List of result by topic

Licence

Date: 18.07.2014

Examinee: Anoku, Martin

Location: Uganda Civil Aviation Authority

Your Result: 24,00 from 40,00 Points (60,00 %)

Topics	Ammount of Questions	Points achieved	Maximum Points	Percent
40. HUMAN PERFORMANCE	40	24,00	40,00	60,00
40.2. Basic aviation physiology and health maintenance	16	7,00	16,00	43,75
40.3. BASIC AVIATION PSYCHOLOGY	15	9,00	15,00	60,00
Total	40	24,00	40,00	60,00

1

Which technique should a pilot use to scan for traffic to the right and left during straight-and-level flight?

- ☐ Concentrate on relative movement detected in the peripheral vision area.
- ☒ Systematically focus on different segments of the sky for short intervals.
- ☐ Continuous sweeping of the windshield from right to left.

2

What visual illusion creates the same effect as a narrower-than-usual runway?

☐ A wider-than-usual runway.

☐ A downsloping runway.

☒ An upsloping runway.

3

A person should be able to overcome the symptoms of hyperventilation by

☐ **refraining from the use of alcohol**

☒ **slowing the breathing rate**

☐ **increasing the breathing rate**

4

Due to visual illusion, when landing on a narrower-than-usual runway, the aircraft will appear to be

- ☐ lower than actual, leading to a higher-than-normal approach.
- ☒ higher than actual, leading to a lower-than-normal approach.
- ☐ higher than actual, leading to a higher-than-normal approach.

5

Rapid or extra deep breathing while using oxygen can cause

☐ cyanosis.

☐ a build-up of carbon dioxide in the body.

☒ hyperventilation.

6

Motion sickness is caused by

- ☒ continued stimulation of the tiny portion of the inner ear which controls sense of balance.
- ☐ the movement of an aircraft causing the stomach to create an acid substance which causes the stomach lining to contract.
- ☐ an instability in the brain cells which affects balance and will generally be overcome with experience.

7

To help manage cockpit stress, a pilot should

- ☒ try to relax and think rationally at the first sign of stress.
- ☐ avoid situations that will degrade the ability to handle cockpit responsibilities.
- ☐ think of life stress situations that are similar to those in flying.

8

What action should be taken if hyperventilation is suspected?

- ☐ **Consciously force yourself to take deep breaths and breathe at a faster rate than normal.**
- ☐ **Consciously breathe at a slower rate than normal.**
- ☒ **Breathe at a slower rate by taking very deep breaths.**

9

Which procedure is recommended to prevent or overcome spatial disorientation?

☐ Reduce head and eye movements to the extent possible.

☒ Rely on the indications of the flight instruments.

☐ Rely on the kinesthetic sense.

10

Fatigue and stress

- ☐ will increase the tolerance to hypoxia when flying below 15 000 feet
- ☒ lower the tolerance to hypoxia
- ☐ do not affect hypoxia at all
- ☐ increase the tolerance to hypoxia

11

The rate and depth of breathing is primarily controlled by:

- ☒ the amount of carbon dioxide in the blood
- ☐ the amount of nitrogen in the blood
- ☐ the total atmospheric pressure
- ☐ the amount of carbon monoxide in the blood

12

When faced with sustained cold temperature, how does the body resist this physical stress?

- ☒ **By increasing cardiac frequency.**
- ☐ **By intense vasoconstriction.**
- ☐ **By speeding up the metabolic rate in the Autonomic Nervous System.**
- ☐ **By vasodilatation which permits a greater flow of blood to the periphery.**

13

A pilot can prevent hypoxia by:

- ☒ using additional oxygen when flying above 10000 ft
- ☐ swallowing, yawing and applying the Valsalva method
- ☐ not exceeding a cabin pressure altitude of 20000 ft
- ☒ relying on the body's built in warning system recognizing any stage of hypoxia

14

Symptoms of decompression sickness

- ☒ are bends, chokes, creeps and neurological symptoms
- ☐ can only develop at altitudes of more than 40000 FT
- ☒ are flatulence and pain in the middle ear
- ☐ are only relevant when diving

15

Flying immediately after SCUBA diving involves the risk of getting:

☒ **decompression sickness**

☐ **hypoxia**

☐ **stress**

☐ **hyperventilation**

16

When exhaling, the expired air contains:

- ☐ more oxygen than in the inhaled air
- ☒ more carbon dioxide than in the inhaled air
- ☐ less water vapour than in the inhaled air
- ☐ more nitrogen than in the inhaled air

17

Hyperventilation is:

- ☒ an increased heart rate caused by a decreasing blood-pressure
- ☐ an increased heart rate caused by an increasing blood pressure
- ☐ a normal compensatory physiological reaction to a drop in partial oxygen pressure (i.e. when climbing a high mountain)
- ☐ a reduction of partial oxygen pressure in the brain

18

Illuminated anti-collision lights in IMC

- ☒ will effect the pilots binocular vision
- ☐ can cause disorientation
- ☐ will improve the pilots depth perception
- ☐ can cause colour-illusions

19

When focussing on near objects:

☒ the shape of lens gets flatter

☐ the pupil gets larger

☐ the cornea gets smaller

☐ the shape of lens gets more spherical

20

Cataract is caused by:

- ☐ A lack of accommodation at the cornea
- ☐ Lack of mobility of the cornea
- ☒ A clouding of the lens
- ☐ A mis-shapened cornea

21

When the weather is foggy, on approach, a pilot may get a feeling of:

- ☐ the airfield being further away than actually is
- ☐ his/her eyes focusing on infinity
- ☒ aircraft altitude being lower than it actually is
- ☐ his/her visual field shrinking (i.e. tunnel vision)

22

For a pilot who is used to land on small and narrow runways only, approaching a larger and wider runway can lead to:

- ☒ early or high "round out"
- ☐ flatter than normal approach with the risk of "ducking under"
- ☒ risk to land short of the overrun
- ☐ steeper than normal approach dropping low

23

Which of the following statements about hyperthermia is correct ?

- ☐ Evaporation is more effective when ambient humidity is high.
- ☒ Vasodilatation is the only mechanism which is capable of reducing body temperature.
- ☐ Complete adaptation to the heat in a hot country takes about a fortnight.
- ☐ Performance is not impaired by an increase in body temperature to 40°C or more.

24

How is Yellow fever contracted?

- ☐ Excessive use of alcohol.
- ☐ By contact with the saliva of infected animals.
- ☒ A virus transmitted by an infected mosquito.
- ☐ Contaminated food or water.

25

Alcohol, when taken simultaneously with drugs, may

- ☐ compensate for side effects of drugs
- ☐ increase the rate of drug elimination from the blood
- ☐ lead to undesired effects only during night flights
- ☒ intensify the side effects of the drugs

26

Carbon Monoxide is particularly dangerous because:

1. Its initial symptoms are not alarming
2. It is colourless
3. Its is odourless
4. It is highly toxic
5. Its effects are cumulative

☒ 2, 3, and 4 only

☐ 1, 2, 3 and 5 only

☐ all of the above

☐ 2, 3, 4 and 5 only

27

As hyperventilation progresses, a pilot can experience

- ☒ **symptoms of suffocation and drowsiness.**
- ☐ **heightened awareness and feeling of well being.**
- ☐ **decreased breathing rate and depth.**

28

Information stays in the short-term memory

- ☐ less than 1 second
- ☐ around 24 hours
- ☒ about 20 seconds
- ☐ from 5 to 10 minutes

29

Planning:

- ☒ allows crew members to anticipate potential risky situations and decide on possible responses
- ☐ in the cockpit typically results in plans that are always easy to modify when things are not as anticipated
- ☐ is dangerous in the cockpit, as it interrupts flight crew creativity
- ☐ is unnecessary in the cockpit, as crew members are so highly trained, they will always know what to do in unusual situations

30

What is the current approach to human error?

- ☒ Realisation that humans are fallible and that systems and procedures should be designed to minimise human error.
- ☐ Realisation that humans are infallible and that systems/procedures should be designed to minimise human error.
- ☐ Realisation that humans are fallible and that systems and procedures should be brought into line to prevent system, latent and procedural errors.
- ☐ Realisation that humans are infallible and that systems and procedures should be brought into line to prevent system/procedural errors.

31

Which of the following statements best characterises a self-centered cockpit ?

- ☐ The communication between crew members always increases when the captain takes charge of a situation
- ☐ The egoistic and self-centered personality of the captain often leads to a synergetic cockpit
- ☒ Each one does his own thing while at the same time assuming that everyone is aware of what is being done or what is going on
- ☐ While decreasing communication, the independence of each member bolsters the crew's synergy

32

"Stereotypes" are preconceptions or prejudices which can lead us to:

- ☒ **act in the same manner in all situations and thus assuring stability.**
- ☐ **mis-judge individuals even if we have contact with them.**
- ☐ **communicate non-verbally with a stranger.**
- ☐ **develop better teamwork by standardizing procedures.**

33

What is the first step in neutralizing a hazardous attitude in the ADM process?

☐ Recognition of invulnerability in the situation.

☐ Recognition of hazardous thoughts.

☒ Dealing with improper judgment.

34

**Examples of classic behavioral traps that experienced pilots may fall into are:
trying to**

- ☐ **promote situational awareness and then necessary changes in behavior.**
- ☐ **assume additional responsibilities and assert PIC authority.**
- ☒ **complete a flight as planned, please passengers, meet schedules, and demonstrate the 'right stuff.'**

35

Some of these dangerous tendencies or behavior patterns which must be identified and eliminated include:

- ☐ Deficiencies in instrument skills and knowledge of aircraft systems or limitations.
- ☐ Peer pressure, get-there-it-is, loss of positional or situation awareness, and operating without adequate fuel reserves.
- ☒ Performance deficiencies from human factors such as, fatigue, illness or emotional problems.

36

The basic drive for a pilot to demonstrate the 'right stuff' can have an adverse effect on safety, by

- ☐ generating tendencies that lead to practices that are dangerous, often illegal, and may lead to a mishap.
- ☐ imposing a realistic assessment of piloting skills under stressful conditions.
- ☒ a total disregard for any alternative course of action.

37

Contrary to a person's personality, attitudes:

- ☒ **form part of personality and, as a result, cannot be changed in an adult**
- ☐ **are essentially driving forces behind changes in personality**
- ☐ **are non-evolutive adaptation procedures regardless of the result of the actions associated with them**
- ☐ **Are the product of personal disposition and past experience with reference to an object or a situation**

38

For a normal and healthy person, personality traits are:

☒ **stable.**

☐ **easy changeable.**

☐ **easy changed by an outside influence.**

☐ **unstable.**

39

The behavioural effects of stress may include:

- 1: manifestation of aggressiveness.
- 2: a willingness to improve communication.
- 3: a willingness for group cohesion.
- 4: a tendency to withdrawal.

The combination of correct statements is:

☐ 1,2 and 3 are correct

☐ 3 and 4 are correct

☒ 1 and 4 are correct

☐ 2,3 and 4 are correct

40

Anxiety can affect:

- 1. Judgement**
- 2. Attention**
- 3. Memory**
- 4. Concentration**

☒ **All are correct**

☐ **1, 2 and 4 only are correct**

☐ **1 and 2 only are correct**

☐ **1 only is correct**
